

OFFICE 365 MANAGEMENT

Don't get bogged down by Office 365 administration. Focus on making the productivity benefits of the cloud a reality.

KEY BENEFITS

Reduce Administrative Overhead

Centralize and simplify Office 365 administrative functions. Discover problems in permissions and configurations through administrative search and then fix issues in bulk. Respond to IT audit requests with comprehensive reporting on content, users and configurations—all through a single pane of glass.

Security and Policy Enforcement

Highlight gaps between your intended governance policies and current state with a health dashboard. Automatically resolve violations and report on or repair unauthorized changes to security settings and configurations as they occur. Manage permissions and sharing—find out who has access to what content, and then modify, remove, promote, or copy the settings for added security.

Management and Restructuring

Seamlessly move or copy content in bulk across Office 365 instances for tenant-to-tenant migration or internal consolidation. Easily deploy new designs, customizations, and configurations. Publish content and synchronize changes within or across Office 365 instances.

TAKE CONTROL OF YOUR BUSINESS DATA IN OFFICE 365

AP Elements Cloud Management easily extends your IT workforce with simplified Office 365 administration, content, and security management. By offering high-speed content migration, audit reporting, and capabilities to restrict access to and sharing of Office 365 SharePoint Online sites, Group team sites, and OneDrive for Business content, AP Elements Cloud Management allows you to maintain the same level of control over your cloud-based assets as on-premises solutions.

TECHNICAL OVERVIEW

ADMINISTRATION & REPORTING

- Manage Office 365 Groups, SharePoint Online, and OneDrive for Business security settings, configurations, and content through a single platform.
- Control sites and site collections with batch mode to quickly implement configurations and enforce policies in bulk.
- Utilize rule-based search capabilities to quickly identify, edit, and manage Office 365 objects.
- Report on global Office 365 security settings and content type usage to track unauthorized changes and take action.
- Generate audit reports for content type changes, item lifecycle, list access, list deletion, permission changes, site actions, and user lifecycle across an entire Office 365 environment.
- Audit all user activities in SharePoint Online, Exchange Online, and Azure Active Directory (AD) through integration with the Office 365 Activity Management API.

SECURITY & POLICY ENFORCEMENT

- Restrict access to and sharing of Office 365 SharePoint Online sites, Group team sites, and OneDrive for Business content both internally and externally.
- Monitor for and automatically notify or adjust unauthorized or out-of-policy changes to configurations, features, permissions, and settings with out-of-the-box, configurable rules.
- Allow administrators to search for and manage native user and group permissions, even at granular levels, directly through Office 365 Groups, SharePoint Online, and OneDrive for Business.
- Assign temporary permissions to individual users or groups within Office 365 and audit all administrative actions for on-demand review.

CONTENT MIGRATION & SYNCHRONIZATION

- Granular deployment of select SharePoint objects and customizations—including site collections, sites, lists, folders, configurations, items, design elements, security settings, Managed Metadata Service settings, web parts, workflow and forms — to other locations.
- Copy, move, or restructure sites, workspaces, content, and topology within or across Office 365 tenants while preserving associated permissions and metadata tags.
- Move content with associated metadata locally within one site collection or consolidate multiple SharePoint sites or Groups down to the item level across Office 365, including tenant-to-tenant migration.
- Tenant-to-tenant migrations are up to ten times faster than before using Microsoft's SharePoint Online Migration API and Azure technologies.
- Replicate content with associated metadata locally within one site collection or keep multiple tenants in sync down to the item level across Office 365.
- Conduct real-time replication of lists, folders, and items.
- Publish select Office 365 SharePoint Online, OneDrive for Business, or Groups content across sites, lists, and libraries using filtered policies based on built-in or custom metadata, such as approval status.
